

# COVID-19 daily epidemiology update

Updated: April 29, 2021, 7 pm EST

Summary of COVID-19 cases across Canada and over time. Contains detailed data about the spread of the virus over time and in different regions of the country. Includes breakdowns by age and sex or gender. Provides an overview of hospitalizations and deaths, testing, variants of concern and exposures.

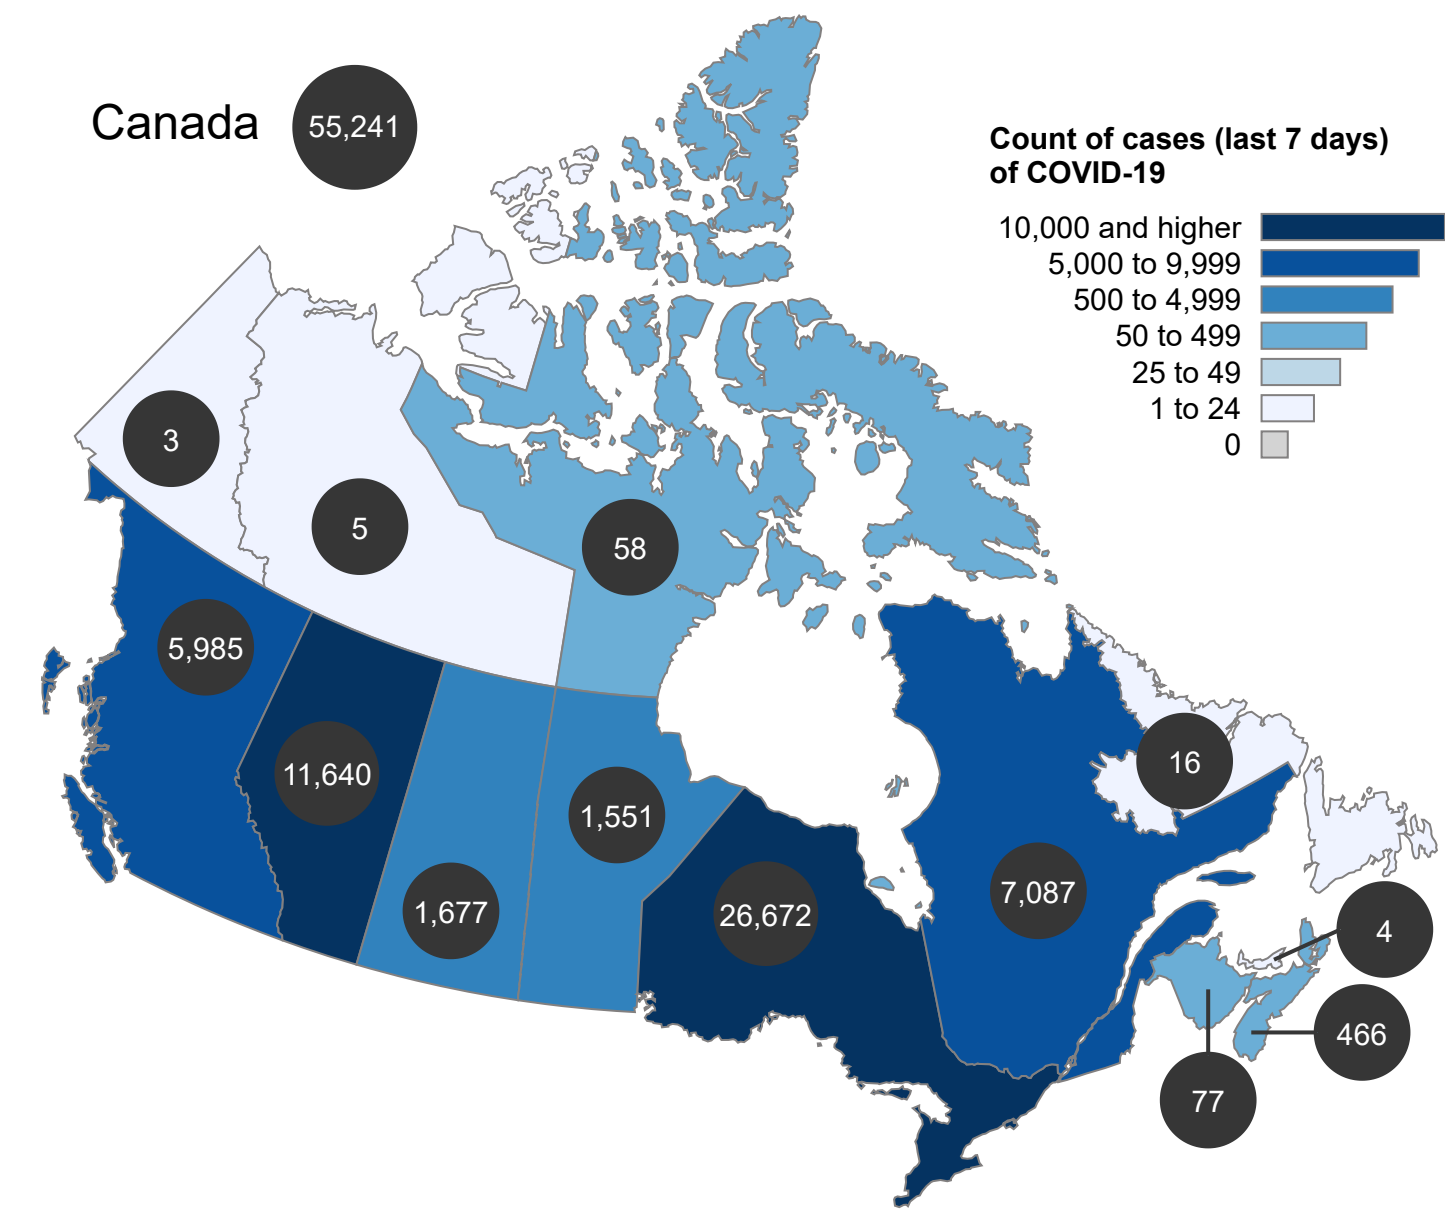

## Key updates as of April 29, 2021, 7 pm EST

Cases today	Total cases	Active cases	Total resolved	Deaths today	Total deaths
8,348	1,211,083	83,452	1,103,462	57	24,169
Tests performed today	Total tests performed	Percent positive (total)	Tests performed per million population		
151,954	31,325,175	4.0%	824,233		

- We update these sections daily at 7:00 PM EST: Key updates, Current situation and National overview.
- We update these sections every Friday: Epidemic curve, Demographics, How people were exposed, and Severe illness and outcomes.
- Most cases (66.7%) and deaths (78.4%) were reported by Ontario and Quebec.
- Of the 13 jurisdictions reporting updates, no new cases were reported in 3 provinces or territories in the past 24 hours.
- Of the 13 jurisdictions reporting updates, no new deaths were reported in 7 provinces or territories in the past 24 hours.

# Current situation

Figure 1a. **Count** of **cases (last 7 days)** of COVID-19, by **province/territory** as of April 29, 2021

The count of cases (last 7 days) of COVID-19 in **Canada** was **55,241** as of April 29, 2021.

This information is based on data from our provincial and territorial partners. It's current as of April 29, 2021, 7 pm EST. For the most up to date data for any province, territory or city, please visit their web site.

# Variants of Concern (VOC) in Canada

All viruses, including COVID-19, change, or mutate, over time. Not all mutations are of concern. However, some changes result in variants of concern (VOC). A VOC has changes that are significant to public health.

For example, they might:

- spread more easily
- cause more severe illness
- require different treatments, or
- not respond the same to current vaccines

We update VOC (Variants of concern) information daily from Sunday to Thursday at 7:00 PM EST, using publicly reported information from the provinces and territories.

**Table 2. Cumulative number of cases involving variants of concern (VOC) publicly reported, as of April 29, 2021 7:00 PM EST**

# Detailed case information

The tables and figures below reflect detailed case information provided to the Public Health Agency of Canada (PHAC) by health authorities in the provinces and territories. This data is updated every week. It may change as we get more information about cases.

Updated: 23 April, 2021, 9 am EST

## Epidemic curve

As of 23 April, 2021, 9 am EST, PHAC has received detailed case report data on 1,152,727 cases. Both exposure and symptom onset date were available for 1,027,408 (89.1%) cases <sup>1</sup>.

The shaded area on the far right of Figure 2 represents lag time. This is the period of time (1 to 2 weeks) before the latest cases are reported to PHAC. This delay is a result of the time required to seek health care, get tested and receive results. It also takes time for public health authorities to gather information on cases. We update this information as it becomes available.

This figure may underestimate the total number of cases among returning travelers. Exposure history is not available for all cases and jurisdictions have not all consistently reported exposure history to PHAC throughout the pandemic.

# Demographics

We have detailed case report data from 1,152,727 cases. We know the age of patients in 94.73% of cases, and both age and gender in 94.63% of cases.

Of the cases reported in Canada so far, about half (50.7%) were female. About one-fifth (18.7%) were 60 years old and over (Figure 3).

## How people were exposed <sup>3</sup>

In Canada ▼, detailed case report data were provided for 1,152,727 cases. We have exposure history for 1,027,530 (89.1%) cases. The probable exposure setting of these cases <sup>1</sup> are:

- any exposure that occurred in Canada: **981,382 (95.5%)**, including
  - from contact with a known COVID case: **475,374 (46.3%)**
  - from contact with a traveller: **7,134 (0.7%)**
  - from an unknown source: **498,874 (48.6%)**
- currently unknown (information pending): **37,541 (3.7%)**
- travelled outside of Canada: **8,607 (0.8%)**

# Severe illness and outcomes

## Hospital use

Figure 4. Daily number of hospital beds and ICU beds occupied by COVID-19 patients as of April 26, 2021

Between April 19, 2021 and April 26, 2021:

- the number of **hospital beds** occupied by COVID-19 patients **decreased** from **3,205** to **3,182** beds.
- the number of **ICU beds** occupied by COVID-19 patients **increased** from **1,215** to **1,365** beds.
- the number of **COVID-19 patients who were mechanically vented** increased from **747** to **788**.

## Hospitalizations and deaths to date

We have detailed case report data on 1,152,727 cases, and hospitalization status for 796,605 (69.1%) of them:

- **59,625 cases (7.5%)** were hospitalized, of whom:
  - **10,798 (18.1%)** were admitted to the ICU
  - **1,777 (3.0%)** needed mechanical ventilation

The provinces and territories provided detailed case report forms for **23,814** deaths related to COVID-19.

- 1 This figure is based on cases for which a case report form was received by the Public Health Agency of Canada from provincial or territorial partners.
  - 2 The shaded area represents a period of time (lag time) where it is expected that cases have occurred but have not yet been reported nationally. The earliest of the following dates were used as an estimate: Onset date, Specimen Collection Date, Laboratory Testing Date, Date Reported to Province or Territory, or Date Reported to PHAC.
  - 3 Exposure information may not be available for all cases. Some jurisdictions haven't consistently reported to PHAC how people were exposed throughout the pandemic. As a result, this may underestimate the total number of cases by different exposures, especially among returning travelers.
  - 4 Where available, gender data was used; when gender data was unavailable, sex data was used. Reliable data on gender diverse respondents are unavailable due to small counts.
